Morgan ORTHODONTICS

Caringly Creating Beautiful Smiles...

Orthodontic care for both adults and children - with a gentle, personal touch.

Orthodontist Northern Virginia

About Us

Kelly E. Morgan DMD, MS

Dr. Morgan decided she wanted to be an orthodontist while studying chemistry at Mary Washington College in Fredericksburg, Virginia.

Through her work at the local free dental clinic, she fell in love with dentistry. After graduating magna cum laude from MWC, she attended the Harvard School of Dental Medicine where she studied under some of the finest professions in Dentistry. Dr. Morgan graduated Omicron Kappa Upsilon (top 10% of dental school class) from Harvard and scored in the top 1% on the National Dental Board Exam. After receiving her doctorate, she studied orthodontics for two years at the University of Louisville, concurrently completing the required classes for a Master's degree in Oral Biology and Certificate in Orthodontics.

Meet Leah

Leah is an Orthodontic Assistant for Morgan Orthodontics. With her wonderful chair side manner and attention to detail, Leah finally found her niche in Orthodontics! When she's not tending to our wonderful patients, she spends her free time hiking and enjoying water sports, along with spending quality time with her young daughter, Hayden! Leah has been a great asset to our team!

Meet Catherine

Catherine is an Orthodontic Assistant for Morgan Orthodontics. A native of North Carolina, she is excited to explore Northern Virginia with her husband, Ben. She is eager to meet and greet our lovely patients with a smile!

At Morgan Orthodontics, we understand orthodontic care can be a frightening prospect, especially for children. That's why we take extra time to ensure your family's experience with us is always a pleasant one, leaving you comfortable and happy throughout the process. It's also the reason Dr. Kelly Morgan is the orthodontist children and adults rely upon for a perfect smile in Leesburg, Ashburn, Lansdowne and surrounding areas in Northern Virginia. Trained by the leading experts in her field and graduating within the top 10% of her class at Harvard University, Dr. Morgan and her team specialize in traditional metal braces, ceramic braces, Invisalign and Incognito braces. With an in house lab that makes our retainers, expanders, mouth guards, bleach trays and more, we provide the services and the appliances our patients need to look and feel their best, quickly and conveniently.

Additionally, we also are proud to offer an extra special service you won't find just anywhere: a "wires in, wires out" procedure that allows you or your child to maintain the highest level of oral hygiene while wearing braces. It even will leave your dentist smiling! With "wires in, wires out," we will actually remove the wires of your braces before you have a cleaning appointment at your dentist's office. This allows your hygienist to provide a deeper cleaning, imperative during the orthodontic process.

Types of Treatment

iTero

Morgan Orthodontics Patients have a comfortable, impression-free experience! Feel the benefits of a high-tech, chairside experience with no more uncomfortable impressions, no more mess and no more gagging associated with the traditional impressions. iTero makes Morgan Orthodontics more efficient with fewer, shorter patient appointments!

Braces

These braces are the clearest clear bracket on the market, and are typically good for high school age patients and adults. They use the traditional approach to orthodontic treatment using braces and wires for a straight and healthy smile.

Self Ligating Braces

New state of the art system of braces in which the wire is held in the brackets by a series of clips instead of ligatures (ligatures are metal or colored elastic ties). With self-ligating brackets time between appointments can be increased therefore allowing for fewer appointments or adjustments throughout treatment.
